Pharmacy Management System Project

An online pharmacy app built using Database Management System (DBMS) offers a seamless experience for users to browse, order, and manage their medications. Leveraging DBMS, the app efficiently organizes vast inventories of pharmaceutical products, ensuring accurate and up-to-date information on availability and pricing. Through robust data management, users can securely store their medical history and prescriptions, facilitating convenient refills and consultations with healthcare professionals. Additionally, DBMS enables the app to implement stringent security measures to safeguard sensitive user data and adhere to regulatory compliance, ensuring a reliable and trustworthy platform for purchasing essential medications online.
